

INSTALLATION OF STRAPS TO VIGO CASE

Case for a cello due to the fact that its specific dimensions is inconvenient luggage. To facilitate the transport of such case it is worn on the back.

In the VIGO case we used six-point shoulder straps mounting system. This solution stabilizes unwanted movements of carrying case worn on the back. Straps to carry cello case can be adjusted according to individual needs resulting from growth or preferences.

To the case there is attached special straps with pads (pre-assembled).

Strap to carry VIGO case consists of:

- a) Pad
- b) Belt with three branches:
 - shorter - with carabiner
 - medium - no carabiner
 - longer - with carabiner

The longer branch should be postponed by the center and the outer belt loop pad, the medium branch should be postponed by opposing the outer belt loop. The shorter branch remains not postponed.

Installation of straps to the case as follows:

1. Medium branch (without carbiner) pull from the regulator, so that the belt in a plastic regulator was postponed only once.

2. Then postpone the belt through the metal frame in the case which is designed for straps.

3. Postpone the belt back through the regulator, blocking it thereby.

4. Shorter branch strap clip with the carabiner into the upper bracket on the case which is designed for straps.

5. Longer branch strap clip with the carabiner into the lower bracket.

6. Repeat all these steps to install the second strap.

7. Using the regulators on the branches longer and medium, adjust the length of the straps to user growth.

8. Then the shorter branch (upper pinned to the handle) loosen with regulator, and shorten until the case stop to wobble during walking.
